

ROLLER PROTECT®

Concentrated roller protection paste

Highly concentrated and economical in use

For use on all inking units

Whether for sheet or roller printing, ROLLER PROTECT is universally used on all ink units which are either not needed or only used half of the time. The high affinity of the printing ink in many cases makes it possible to run ink into the ink without washing.

Rollers last longer

The use of ROLLER PROTECT will protect roller surfaces against damage from running dry. Rollers last longer and print quality is retained in the long-term since roller surfaces are not attacked.

Safe for people and material

No contained hazardous substances, a high flash point and compatibility with all alloy rollers make ROLLER PROTECT a safe and easy-to-use product.

Use

Apply an adequate amount of ROLLER PROTECT on the washed rollers with a spatula or dose it through the ink fountain. For tricky ink shades, roller washing is necessary.

Pack sizes: 200 g tubes, 5 tubes per carton.
1 kg cans, 6 cans per carton

ROLLER PROTECT protects rollers from damage in plants where no ink is running or only half-runs are printed.

ROLLER PROTECT may safely be used on all alloy rollers without their being attacked or blunted.

ROLLER PROTECT has a flash point of more than 150° C and as a result is neither inflammable nor hazardous. Non-classified!

For standard work, the washing of the rollers before the filling with ink is unnecessary. For more tricky ink shades, ROLLER PROTECT must be washed off with a standard roller detergent.
