

## Efficient roller cleaning paste for fast ink switching

### Deep-cleaned rollers

#### For use on all inking units

Whether for sheet or roller printing, ROLL-O-CLEAN deep cleans the rollers and dissolves residual ink fast and without residues.

It is particularly suitable for fast switches from dark to light-colored inks. Adhesiveness is adjusted in such a manner that the rollers even turn when an adequate amount is applied and the paste is worked into the roller surface as a result of which the high cleaning action is obtained for short treatment application times.

#### Rollers last longer

ROLL-O-CLEAN deep cleans roller surfaces to remove ink and contaminations. Regular cleaning protects the rollers from blunt surfaces and keeps it ink-receptive. Print quality is ensured and the rollers last longer.

#### Safe for people and material

No contained hazardous substances, a high flash point and compatibility with all roller surfaces make ROLL-O-CLEAN a safe and easy-to-use product.

#### Use

Directly apply to the roller surface with the spatula or dosing through the ink fountain.

ROLL-O-CLEAN rub in for approx. 3 - 5 min. and then wash.

Pack sizes: 200g tubes, 5 tubes per carton  
0.8 kg cans, 6 cans per carton

ROLL-O-CLEAN dissolves residual ink and removes contaminations in-depth from the rollers.

ROLL-O-CLEAN protects the rollers from becoming blunt, makes them ink-receptive and prolongs the service life of the rubber rollers.

ROLL-O-CLEAN may safely be used on all alloy rollers without the rollers being attacked, shrinking or growing in diameter.

ROLL-O-CLEAN is a safe product without hazardous components.
